Project Description

Student Name

Bharti Kumari

Title

Blog Management

Introduction

Blog management website is a web-based application, with the help of this blog management website, admin can post, update and delete blogs, he can also add and delete categories of blogs. Admin can add and delete others as admin or co-admin.

All the features that should be a feature in a simple blog management website have been included in this website, such as features like pagination search, we can also filter the blog according to the category.

The website's security has also been taken care of, the admin panel cannot be accessed without login, cannot come out of the dashboard without logout, and the backend code is well written for all these security.

Technology used

- Html has been used to create the structure of the website.
- Bootstrap and CSS are used for designing
- JavaScript and PHP are used to write the backend code.
- Free server was used to host the website, whose link is https://in.000webhost.com/
- Website still running at this location https://assignmentis.000webhostapp.com/
